

I am

a Farmer

normal person
who wishes to
lead a healthy life

lab
technician

affected
person

corporate
companies

I'm trying to

irrigate my crops with
sufficient minerals
needed for its growth

drink water with
sufficient amount
of minerals

water quality is needed
inorder to satisfy the
industrial needs

find a good
quality water

Need a good quality
measure to use
upon their products

But

unaware about
how to identify
the quality

do not know
how to find it

unaware of
water quality
index(WQI)

unaware how
and where to
find it

unable to
sort out

Because

the water quality
is already lacking

the water is
contaminated
recently

There are many
models for
prediction

most of the disease
spread due to
contamination of water

cannot find an
appropriate
metric

Which makes me feel

worried about
the yield

concerned about
the health

agitated

Restless

worried
